Abrasive Blasting and Coating | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Abrasive Blasting and Coating

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-be	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrit of a stru	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing as stos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that re mporar upp to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

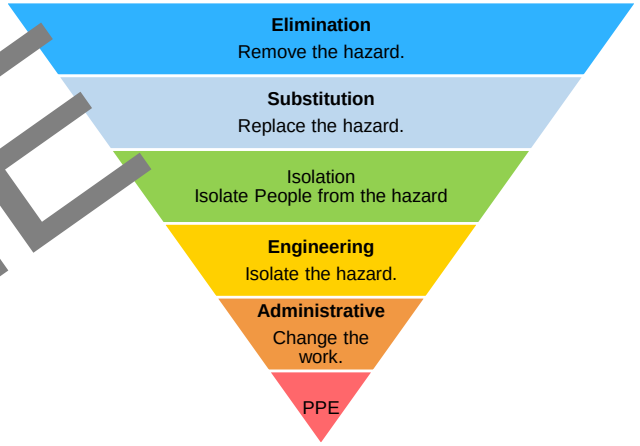
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Poor ventilation, tripping hazards	2M	- Ensure the blasting area is well-ventilated by implementing proper ventilation systems such as exhaust fans, ducts, and air intake vents. - Clearly mark and designate abrasive blasting and powder coating zones to avoid cross-contamination of dust and debris. - Keep all walkways, aisles, and workspaces clean and free from trip hazards, such as cords and hoses. - Regularly check for and remove any accumulated debris or spills which could lead to tripping hazards. - Install adequate lighting in work areas to improve visibility and minimise the risk of accidents. - Train employees on proper housekeeping techniques and ensure they understand the importance of maintaining a clean and clutter-free workspace. - Apply anti-slip coatings or use slip-resistant mats in work areas with high foot traffic or where spills may occur. - Display cautionary signage indicating potential hazards, such as "Wet Floor" signs or "Watch Your Step." - Encourage workers to wear appropriate footwear with slip-resistant soles to reduce the risk of falls. - Conduct regular inspections of the work area to identify and rectify potential hazards promptly. - Implement a Safe Work Method Statement (SWMS) for abrasive blasting and powder coating processes, providing clear guidelines on safe practices and procedures. - Provide proper storage solutions for equipment and materials, ensuring they are stored securely and out of the way when not in use. - Establish an emergency action plan in case of accidents or incidents, including clear evacuation routes and designated assembly points. - Communicate and reinforce the importance of following control measures through toolbox talks, safety briefings, and ongoing training sessions for all workers involved in abrasive blasting and powder coating tasks.	1L	
2. Surface cleaning	Chemical exposure, eye injury due to debris	3H	- Proper Personal Protective Equipment (PPE): Ensure that employees and workers are provided with, and wear appropriate protective gear such as gloves, safety goggles, face shields or masks, long-sleeved clothing and close-toed shoes to reduce the risk of chemical exposure and eye injury from debris. - Training: Conduct regular training sessions for all workers involved in surface cleaning, educating them about the risks associated with abrasive blasting and powder coating, proper handling and storage of chemicals, and safe work practices to minimise hazards.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Chemical Safety Data Sheets (SDS): Keep a readily accessible copy of the latest SDS for all chemicals used in the workplace, and train employees on how to interpret and use this information in case of an emergency or if there is a concern about possible exposure. - Ventilation: Ensure adequate ventilation is present within the workspace to minimise inhalation of harmful fumes, dust, and other airborne contaminants during the surface cleaning process. - Eye wash station: Install and maintain easily accessible eye wash stations nearby the work area to allow for immediate rinsing of eyes if any debris or chemicals happen to make contact. - Proper disposal of waste materials: Implement a strict waste management plan for the proper disposal of chemical residues, used abrasive/blasting materials, and any contaminated personal protective equipment to minimise the risk of chemical spills or secondary exposure. - Regular equipment maintenance and inspection: Conduct routine checks and servicing of all equipment utilised in the surface cleaning process to ensure it's in good working order, minimising the likelihood of accidents or malfunctions leading to hazard exposure. - Signage and labels: Clearly mark hazardous areas and chemical containers with appropriate warning signs and labels, ensuring all workers are aware of potential dangers associated with particular tasks or substances. - Safe work procedures: Establish written Safe Work Method Statements (SWMS) for each task related to surface cleaning, outlining step-by-step processes and necessary control measures to minimise hazards. - Emergency response plan: Develop and implement an emergency response plan to handle potential incidents involving chemical exposure, eye injury or other hazards related to abrasive blasting and powder coating. Regularly review and update this plan, ensuring all workers are familiar with the correct procedures. - Encourage a safety culture: Foster a positive workplace culture where everyone is encouraged to report near misses and unsafe situations, discuss potential improvements to existing processes and work together proactively to reduce the risk of accidents and injuries on the job.		
3. Equipment setup	Electrical hazards, noise exposure	2M	- Regular inspection and maintenance: Ensure that all electrical equipment associated with abrasive blasting and powder coating is regularly inspected and maintained by a qualified electrician to prevent electrical hazards. - Use of residual current devices (RCDs): Install RCDs on power outlets to protect workers from potential electrical hazards during the setup of equipment. - Proper grounding of equipment: Ensure all electrical equipment is grounded, following the manufacturer's guidelines, to reduce the risk of electrical shock.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Use of appropriate personal protective equipment (PPE): Provide and ensure the use of appropriate hearing protection for workers exposed to high noise levels during the equipment setup process. - Training and supervision: Provide adequate training and supervision to workers handling abrasive blasting and powder coating equipment to prevent unsafe practices and reduce the likelihood of accidents. - Cable and hose management: Properly plan and organise cable and hose routes to avoid trip hazards and prevent damage to electrical cables, which can lead to electrical hazards. - Noise control measures: Implement engineering controls such as sound barriers, mufflers, or silencers to reduce noise exposure during equipment setup. - Safe work procedures: Develop and enforce safe work procedures for setting up equipment, including guidelines for safely connecting and disconnecting electrical components. - Isolate power sources: Ensure power supplies are isolated and locked out before commencing any repair or maintenance work on equipment. - Temperature control: Monitor and manage temperature levels in the equipment setup area to prevent overheating of electrical appliances, which could result in electrical hazards. - Emergency shut-off mechanisms: Equip machinery with emergency shut-off mechanisms to enable workers to quickly halt operations in case of an emergency. - Notify workers of potential hazards: Communicate the potential hazards present during equipment setup with all workers involved in the process, ensuring they understand and follow appropriate safety precautions.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti se tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im ementa of cont measures.	☐	☐	
Permit requirements specified, such as Hot Wor Electrical Work, W at Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us d.	☐	☐	
Details of inspection checks required for any equipment listed a noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
