Brick Clay Manufacture Bickley Kiln | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Brick Clay Manufacture Bickley Kiln

Business Name: [Company Name]		ABN: [ABN]	SWMS#
Business Address: [Company Address]			
Contact Person:	Phone: [Phone]	Email:	

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:

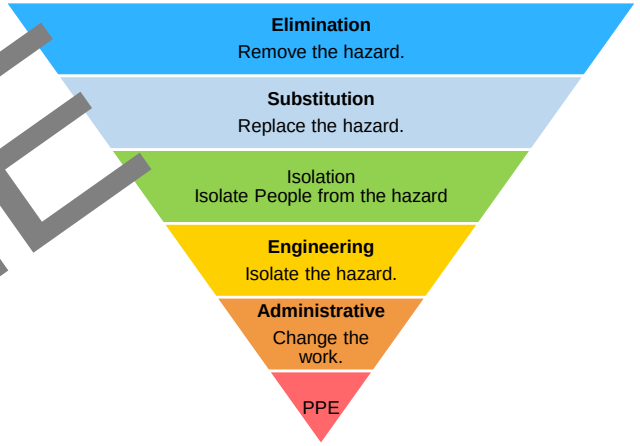
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Manual handling, Dust inhalation	2M	- Implement a comprehensive manual handling training programme for all employees involved in the brick clay manufacturing process to ensure they are familiar with correct techniques and procedures. - Introduce ergonomic equipment such as conveyor belts and mechanical lifts, designed to minimise excessive reaching, bending, and twisting during the preparation phase of the brick clay manufacturing process. - Regularly maintain and inspect tools and equipment used during the preparation process to ensure that they are functioning optimally and safely, reducing the risk of manual handling injuries resulting from faulty equipment. - Ensure that employees wear appropriate personal protective equipment (PPE) during the entire process, which may include gloves, safety footwear, dust masks, and eye protection, to protect against potential hazards. - Establish clear guidelines on maximum weight limits that can be handled by a single worker in order to prevent strains, sprains, and musculoskeletal disorders. Provide necessary equipment to help workers handle loads exceeding these limits safely. - Utilise adequate ventilation systems to remove airborne dust particles during the preparation process, ensuring that the work environment is well-ventilated and dust inhalation risk is minimised. - Encourage regular breaks for workers engaged in heavy lifting and other repetitive tasks to minimise muscle fatigue and the risk of injuries related to overexertion. - Store raw materials and finished products in designated areas where they are easily accessible for workers, thus minimising the need for excessive manual handling. - Develop an emergency response plan for scenarios involving manual handling injuries and dust inhalation incidents, including clear communication channels and first aid facilities on-site. - Conduct regular risk assessments to identify new hazards or changes in existing hazards relating to manual handling and dust inhalation. Update control measures accordingly to ensure continued protection for workers. - Foster a culture of open communication between management and employees regarding workplace health and safety concerns, encouraging workers to report any injuries, near misses, or hazardous situations immediately.	1L	
2. Material Mixing	Dust exposure, Equipment failure	3H	- Proper ventilation: Ensure that the working area is well-ventilated to reduce the concentration of dust particles in the air, minimising the risk of dust exposure to workers. - Personal protective equipment (PPE): Provide appropriate PPE, including face masks or respirators, safety goggles, and gloves for all workers involved in material mixing to protect them from dust exposure and potential injuries from equipment failure.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Regular equipment maintenance and inspection: Conduct periodic inspections and maintenance of machinery involved in the material mixing process to ensure their optimal functioning and reduce the risk of equipment failure. - Worker training: Provide adequate training to workers about proper operating procedures, handling techniques, and potential hazards involved in material mixing, enabling them to identify and mitigate risks effectively. - Dust suppression methods: Implement effective dust suppression techniques like wet-suppression systems or enclosed mixing stations to minimize dust generation during the mixing process. - Emergency response plan: Develop a comprehensive emergency response plan to address potential incidents arising from dust exposure or equipment failure, ensuring prompt action and minimising harm to workers. - Task rotation: Schedule work rotation for workers involved in material mixing to limit their continuous exposure to dust and reduce the chances of long-term health issues. - Safe work procedures: Establish standard operating procedures and enforce adherence to these guidelines, significantly reducing the likelihood of equipment failure and associated accidents. - Monitoring and surveillance: Regularly monitor the working environment for the presence of hazardous dust particles and initiate appropriate control measures if excessive levels are detected. - Continuous improvement: Review and update the Safe Work Method Statement (SWMS) periodically to incorporate any new regulations, technology advancements, or lessons learned from previous incidents, maintaining an up-to-date and effective set of control measures.		
3. Moulding & Shaping	Repetitive strain injury, Cutting hazard	3H	- Proper training and guidance: Ensure that workers have received adequate training in correct moulding and shaping techniques to prevent strain and injuries. - Ergonomic tools and equipment: Use ergonomically designed tools with comfortable handles and proper size, which will help reduce the risk of repetitive motion injuries. - Regular breaks: Encourage workers to take regular breaks to stretch and rest their hands and wrists, preventing repetitive strain injuries. - Work rotation: Rotate workers among different tasks throughout the day to reduce the likelihood of long-term exposure to repetitive motions for a single worker. - Safety gloves: Require workers to wear cut-resistant gloves when handling sharp or jagged materials, reducing the risk of cutting injuries. - Tool maintenance: Ensure all tools are regularly inspected for damage, wear, or poor functioning, as damaged tools can contribute to increased injury risk.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Workspace design: Make sure workstations are set up properly, with enough space and good lighting to minimise awkward or uncomfortable working positions. - Safe work practices: Establish and enforce proced[illegible]s for safe handling and use of tools and materials in the moulding and shaping [illegible]ocesses. - Proper body mechanics instruction: Teach [illegible]orkers the i[illegible]ortance of appropriate body mechanics and posture while performi[illegible]asks to [illegible]inimise the risk of strain injuries. - Risk assessment: Conduct [illegible]ular risk assessm[illegible]ts to iden[illegible] potential hazards and implement strategies to m[illegible]ate them. - First aid kit availab[illegible]e firs[illegible]id kits readily available at the worksite should an injury occur, pro[illegible]ding fas[illegible]treatm[illegible]t for any i[illegible]ries sustained. - Reporting sy[illegible]em: Establi[illegible] a clear r[illegible]g process for workers to promptly notify super[illegible]ors of a[illegible] safet[illegible]oncerns, haz[illegible]ds, or incidents. This allows early interv[illegible]n and [illegible]ation of risks while fostering a positive safety culture within the workp[illegible]e.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]ions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
