

**Conveyors (Roller) | SAFE WORK METHOD STATEMENT (SWMS)**

**TASK OR ACTIVITY: Conveyors (Roller)**

Business Name: [Company Name] ABN: [ABN] SWMS#

Business Address: [Company Address]

Contact Person: Phone: [Phone] Email:

**THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PROJECT MANAGER OF THE PROJECT**

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature: Title: Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS, as well as reviews and modifications of the SWMS.

Full Name: Title: Phone:

**ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED** NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, to conduct a risk assessment of those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

**CLIENT OR PRINCIPAL CONTRACTOR DETAILS**

Client:	SCOPE OF WORKS Provide a detailed description of the specific work being carried out (otherwise known as scope of works).
Project Name:	
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

**ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT**

<input type="checkbox"/> involves a risk of a person falling more than 2 meters.	<input type="checkbox"/> is carried out on or near pressurised gas mains or piping.
<input type="checkbox"/> is carried out on a telecommunication tower.	<input type="checkbox"/> is carried out on or near chemical, fuel or refrigerant lines.
<input type="checkbox"/> involves demolition of an element of a structure that is load-bearing.	<input type="checkbox"/> is carried out on or near energised electrical installations or services.
<input type="checkbox"/> involves demolition of an element related to the physical integrity of a structure.	<input type="checkbox"/> is carried out in an area that may have a contaminated or flammable atmosphere.
<input type="checkbox"/> involves, or is likely to involve, disturbing asbestos.	<input type="checkbox"/> involves tilt-up or precast concrete.
<input type="checkbox"/> involves structural alteration or repair that requires temporary support to prevent collapse.	<input type="checkbox"/> is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
<input type="checkbox"/> is carried out in or near a confined space.	<input type="checkbox"/> is carried out in an area of a workplace where there is any movement of powered mobile plant.
<input type="checkbox"/> is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	<input type="checkbox"/> is carried out in areas with artificial extremes of temperature.
<input type="checkbox"/> is carried out in or near water or other liquid that involves a risk of drowning.	<input type="checkbox"/> involves diving work.

**ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY**

<input type="checkbox"/> Forklift	<input type="checkbox"/> Crane/s	<input type="checkbox"/> Hoist/s	<input type="checkbox"/> Excavator	<input type="checkbox"/> Backhoe/Loader	<input type="checkbox"/> Boom Lift	<input type="checkbox"/> EWP	<input type="checkbox"/> Genie Lift
<input type="checkbox"/> Trencher	<input type="checkbox"/> Drilling Rig	<input type="checkbox"/> Trucks	<input type="checkbox"/> Formwork	<input type="checkbox"/> Bobcat	<input type="checkbox"/> Flammable Gas	<input type="checkbox"/> Fuel	<input type="checkbox"/> Dozer
<input type="checkbox"/> High Voltage	<input type="checkbox"/> Mulcher	<input type="checkbox"/> Tilt-up Panels	<input type="checkbox"/> Roller	<input type="checkbox"/> Scissor Lift	<input type="checkbox"/> Tractor	<input type="checkbox"/> Other -	

**RISK MATRIX**

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	<b>Elimination</b> Remove the hazard.
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	<b>Substitution</b> Replace the hazard.
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	<b>Isolation</b> Isolate People from the hazard
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	<b>Engineering</b> Isolate the hazard.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	<b>Administrative</b> Change the work. <b>PPE</b>

**Notes on Hierarchy of Controls:** Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.

**PERSONAL PROTECTIVE EQUIPMENT (PPE)**

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	EYE/FACE PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

**Note:** A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Electric shock, Trip hazards	2M	<ul style="list-style-type: none"> <li>- Conduct a thorough risk assessment and safety briefing before commencing work, ensuring that all workers are aware of potential hazards and the necessary control measures.</li> <li>- Ensure that all personnel handling electrical equipment are properly trained and competent in safe work practices, including understanding the risks associated with electric shocks.</li> <li>- Verify that all electrical connections are secure, properly insulated, and grounded to minimise potential exposure to electric shock hazards.</li> <li>- Apply appropriate lockout/tagout procedures when working on or near live electrical components and ensure that only authorised individuals have access to these components.</li> <li>- Maintain a clean and well-organised work area, regularly inspecting for and eliminating trip hazards like clutter, debris, or tangled cables.</li> <li>- Employ cable management systems to keep cords neatly bundled and out of walkways, reducing the likelihood of trips.</li> <li>- Use high-visibility safety tape or cones to clearly mark any gaps or elevation changes along pathways where conveyors are being installed or operated.</li> <li>- Install proper lighting around the conveyor system to ensure sufficient visibility, reducing the risk of workers tripping over unseen obstacles.</li> <li>- Provide appropriate personal protective equipment (PPE) for all workers involved in conveyor activities, such as safety shoes with slip-resistant soles and electrically rated gloves.</li> <li>- Encourage regular communication between team members regarding potential hazards and ensure processes are in place for prompt reporting and addressing of safety concerns.</li> <li>- Schedule regular inspection and maintenance of conveyor systems to proactively address potential issues and maintain safe operations.</li> <li>- Implement comprehensive emergency response plans, including evacuation routes and clearly marked emergency exits to use in the event of an incident.</li> <li>- Continuously review and update standard work methods (SWMS) to ensure effective hazard management, incorporating new information, and adapting to changes in equipment or processes.</li> </ul>	1L	
2. Installation	Crushing hazards, Manual handling risks	3H	<ul style="list-style-type: none"> <li>- Proper equipment selection: Choose the suitable conveyors and components per the manufacturer's guidelines to ensure they are appropriate for the specific installation.</li> <li>- Training programs: Provide employees with adequate training regarding the safe operation, handling, and maintenance of conveyors, including emergency procedures and risk management practices.</li> </ul>	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> <li>- Pre-installation inspection: Inspect all conveyor components before commencing the installation, ensuring they are in good condition free from defects or damage that could increase hazards.</li> <li>- Lifting equipment utilisation: Use appropriate lifting equipment such as forklifts, hoists, or portable cranes for moving heavy items during installation. This can vastly reduce manual handling risks associated with carrying or lifting heavy loads.</li> <li>- Safe working load (SWL): Ensure the selected lifting equipment has a sufficient SWL, adhering to weight restrictions for safe operations.</li> <li>- Lifting plan: Develop a detailed plan for lifting and placement of components, taking into account load limits, clearances, and any potential obstacles that may be present in the path of the load.</li> <li>- Proper use of personal protective equipment (PPE): Mandate the use of appropriate PPE such as gloves, safety footwear, helmets, and high-visibility clothing to minimise injury risk during the installation process.</li> <li>- Barricade the work area: Create a designated workspace by setting up barriers, cones or warning signs to prevent unauthorised personnel from entering the installation area.</li> <li>- Team communication: Establish clear communication protocols among the installation team members, ensuring all parties remain informed of hazards and safe work procedures.</li> <li>- Lockout/tagout procedures: Implement lockout/tagout practices during conveyor installation, effectively controlling the energy sources and reducing the risk of unexpected activation.</li> <li>- Adequate lighting: Ensure proper illumination levels in the installation area, allowing workers to clearly see potential hazards and assess risks more accurately.</li> <li>- Regular breaks and task rotation: Schedule regular breaks and rotate tasks amongst workers to reduce the risk of fatigue and injury from repetitive or strenuous activities.</li> <li>- Post-installation inspection and testing: Inspect and test the installed conveyor system to ensure it operates safely and in accordance with the manufacturer's specifications, rectifying any issues before employees commence using it.</li> </ul>		
3. Conveyor Alignment	Manual handling risks, Noise exposure	2M	<ul style="list-style-type: none"> <li>- Conduct a pre-operation assessment of the conveyor system to ensure that all components are properly aligned, secured, and functioning effectively, minimising manual handling risks and noise exposure.</li> <li>- Provide appropriate mechanical aids and equipment such as trolleys and lifters for the transportation and positioning of heavy materials or equipment, reducing the need for manual handling.</li> <li>- Implement regular maintenance and inspection schedules for the conveyor system to promptly identify and address any misalignments, thereby reducing the risk of injury due to manual handling or extended noise exposure.</li> </ul>	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> <li>- Train workers on proper techniques for lifting, carrying, and positioning objects along the conveyor system to reduce the potential for musculoskeletal injuries as a result of incorrect manual handling practices.</li> <li>- Install noise-reducing materials or barriers around high-decibel areas to minimise noise exposure/concentration and protect workers from excessive noise levels that could lead to hearing damage.</li> <li>- Issue personal protective equipment (PPE) such as earplugs or earmuffs to workers to mitigate the risk of hearing loss resulting from extended periods of noise exposure in their work environment.</li> <li>- Schedule regular breaks to give workers time to recover from physical strain and repeated exposure to noise, allowing their bodies to rest and reducing the risk of injury.</li> <li>- Enforce a clear communication protocol between workers operating in loud environments so that they can communicate effectively and safely without compromising their hearing abilities.</li> <li>- Monitor and control access to the work area and restrict entry only to authorised personnel wearing required safety gear, ensuring that workers and visitors are adequately protected from identified hazards.</li> <li>- Develop, implement, and communicate emergency response plans to effectively handle incidents related to conveyor alignment or noise-related hazards, and routinely assess and update these plans as needed.</li> <li>- Ensure sufficient lighting and visibility for workers managing the conveyor, facilitating safe navigation through the workspace and limiting the likelihood of accidents and injuries associated with manual handling or improper alignment.</li> <li>- Encourage workers to report any concerns regarding manual handling or noise exposure in their work environment, fostering a culture of safety and continuous improvement.</li> <li>- Regularly review and update the Safe Work Method Statement (SWMS) for conveyor systems to ensure that all control measures remain relevant, effective, and capable of managing the hazards associated with conveyor alignment and associated tasks.</li> </ul>

**SIGNATORIES OF THE SAFE WORK METHOD STATEMENT**

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

**SAFE WORK METHOD STATEMENT MONITORING AND REVIEW**

**The SWMS must be reviewed regularly** to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are needed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

**The SWMS must be monitored regularly** for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

**SAFE WORK METHOD STATEMENT REVIEW CHECKLIST**

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	<input type="checkbox"/>	<input type="checkbox"/>	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input type="checkbox"/>	<input type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input type="checkbox"/>	<input type="checkbox"/>
