

## Decoiler | SAFE WORK METHOD STATEMENT (SWMS)

### TASK OR ACTIVITY: Decoiler

Business Name: [Company Name]

ABN: [ABN]

SWMS#

Business Address: [Company Address]

Contact Person:

Phone: [Phone]

Email:

### THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature:

Title:

Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS, as well as reviews and modifications of the SWMS.

Full Name:

Title:

Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

## ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT

<input type="checkbox"/> involves a risk of a person falling more than 2 meters.	<input type="checkbox"/> is carried out on or near pressurised gas mains or piping.
<input type="checkbox"/> is carried out on a telecommunication tower.	<input type="checkbox"/> is carried out on or near chemical, fuel or refrigerant lines.
<input type="checkbox"/> involves demolition of an element of a structure that is load-bearing.	<input type="checkbox"/> is carried out on or near energised electrical installations or services.
<input type="checkbox"/> involves demolition of an element related to the physical integrity of a structure.	<input type="checkbox"/> is carried out in an area that may have a contaminated or flammable atmosphere.
<input type="checkbox"/> involves, or is likely to involve, disturbing asbestos.	<input type="checkbox"/> involves tilt-up or precast concrete.
<input type="checkbox"/> involves structural alteration or repair that requires temporary support to prevent collapse.	<input type="checkbox"/> is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
<input type="checkbox"/> is carried out in or near a confined space.	<input type="checkbox"/> is carried out in an area of a workplace where there is any movement of powered mobile plant.
<input type="checkbox"/> is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	<input type="checkbox"/> is carried out in areas with artificial extremes of temperature.
<input type="checkbox"/> is carried out in or near water or other liquid that involves a risk of drowning.	<input type="checkbox"/> involves diving work.

## ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

<input type="checkbox"/> Forklift	<input type="checkbox"/> Crane/s	<input type="checkbox"/> Hoist/s	<input type="checkbox"/> Excavator	<input type="checkbox"/> Backhoe/Loader	<input type="checkbox"/> Boom Lift	<input type="checkbox"/> EWP	<input type="checkbox"/> Genie Lift
<input type="checkbox"/> Trencher	<input type="checkbox"/> Drilling Rig	<input type="checkbox"/> Trucks	<input type="checkbox"/> Formwork	<input type="checkbox"/> Bobcat	<input type="checkbox"/> Flammable Gas	<input type="checkbox"/> Fuel	<input type="checkbox"/> Dozer
<input type="checkbox"/> High Voltage	<input type="checkbox"/> Mulcher	<input type="checkbox"/> Tilt-up Panels	<input type="checkbox"/> Roller	<input type="checkbox"/> Scissor Lift	<input type="checkbox"/> Tractor	<input type="checkbox"/> Other -	

RISK MATRIX									
LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS	
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			<b>Elimination</b> Remove the hazard.	
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	<b>Substitution</b> Replace the hazard.	
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	<b>Isolation</b> Isolate People from the hazard	
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	<b>Engineering</b> Isolate the hazard.	
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	<b>Administrative</b> Change the work.	
<b>Notes on Hierarchy of Controls:</b> Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.									

  

PERSONAL PROTECTIVE EQUIPMENT (PPE)											
FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	EYE PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

**Note:** A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

- persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
- persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
- workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Trips and slips, Manual handling injuries	2M	<ul style="list-style-type: none"> <li>- Proper housekeeping: Ensure the work area is clean, well-organised, and free from clutter to minimise the risk of tripping and slipping hazards.</li> <li>- Provide appropriate PPE: Workers must wear slip-resistant footwear to reduce the chances of slips and trips. Gloves should also be worn for manual handling tasks.</li> <li>- Ensure sufficient lighting: Make sure that the workspace is adequately lit so that workers can clearly see any obstacles or hazards that may cause them to trip or slip.</li> <li>- Clearly mark potential hazards: Use signs, duct tape, or other means to clearly mark potential hazardous areas such as uneven surfaces or wet floors.</li> <li>- Use anti-slip flooring materials: In work areas where slips are likely to occur, use anti-slip flooring materials to provide better traction.</li> <li>- Train workers on proper lifting techniques: Offer regular training sessions highlighting safe methods for lifting and carrying objects in the workplace to reduce manual handling issues.</li> <li>- Use ergonomic equipment: Provide equipment and tools designed to minimise strain on muscles during manual handling tasks, such as lightweight cartons and height-adjustable trolleys.</li> <li>- Implement a buddy system: Encourage workers to assist one another during heavy lifting operations, thus helping to reduce the risk of injury due to overexertion.</li> <li>- Maintain equipment: Regularly inspect and maintain machinery utilised in the workplace, including decoilers, ensuring they are functioning properly and safely.</li> <li>- Allocate adequate breaks: Schedule multiple rest breaks during the workday, which will allow workers to recover and prevent fatigue-related accidents.</li> <li>- Develop an emergency plan: Create procedures outlining how to respond should a worker become injured, ensuring that all workers are aware of these plans and know how to evacuate the facility if necessary.</li> <li>- Conduct regular safety audits: Consistently reassess the workplace for hazards, making adjustments or improvements to safety measures when necessary.</li> <li>- Foster a safety-conscious culture: Encourage all workers to report potential hazards or near-miss incidents to supervisors, emphasising the importance of safety in the workplace and promoting a culture of continuous improvement.</li> </ul>	1L	
2. Setup Decoiler	Crushing hazards, Pinch-point hazards	3H	<ul style="list-style-type: none"> <li>- Conduct a thorough risk assessment before commencing the setup of the decoiler to identify potential hazards and implement necessary control measures.</li> <li>- Ensure all decoiler operators and workers involved in the setup process are properly trained and experienced on the specific type of machine they will be working with.</li> <li>- Inspect the decoiler and surrounding area for obstructions, defects or damage that could pose a risk during the setup process, and make any necessary repairs before proceeding.</li> </ul>	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> <li>- Wear appropriate personal protective equipment (PPE) such as steel-toed boots, gloves, safety glasses, and high-visibility clothing to reduce the risk of injury from crushing or pinch-point hazards.</li> <li>- Follow the manufacturer's instructions and applicable regulations when setting up the decoiler, ensuring all components are properly installed and secured.</li> <li>- Implement physical guarding around the decoiler to protect workers from accidental contact with pinch points, moving parts, and other potential hazards.</li> <li>- Utilise lockout/tagout procedures during the setup process to prevent unintended energization of the decoiler machine.</li> <li>- If manual manipulation of materials is required during the setup process, use lifting aids like hoists or jacks to minimise the risk of crushing injuries.</li> <li>- Encourage clear communication between workers involved in the setup process to promote teamwork and ensure everyone remains aware of their colleagues' whereabouts and activities.</li> <li>- Establish and clearly mark designated walkways and safe zones for workers to navigate during the setup process, keeping them away from high-risk areas.</li> <li>- Regularly inspect and maintain the decoiler and its components to ensure proper functioning and prevent potential hazards due to wear or malfunction.</li> <li>- Implement an emergency stop mechanism on the decoiler, so it can be easily shut down in case of unexpected hazards or accidents.</li> <li>- Enforce a strict policy against horseplay or distractions during the setup process to maintain focus and minimise the risk of injury.</li> <li>- Review and update the Safe Work Method Statement (SWMS) and relevant guidelines on a regular basis to ensure they remain current and effective in minimising hazards during decoiler setup.</li> </ul>		
3. Loading Coil	Rotational hazards, Falls from height	3H	<ul style="list-style-type: none"> <li>- Proper training: Ensure that all workers involved in the loading coil process have undergone appropriate and ongoing health and safety training, including specific guidance on handling and operating decoilers.</li> <li>- Use of appropriate PPE: Require all workers to wear necessary personal protective equipment (PPE) when working with or near the decoiler, such as gloves, safety footwear, helmets, and high-visibility vests.</li> <li>- Limit work at height: Minimise the need for workers to be at height when loading the coil by using lifting equipment specifically designed for handling coils or implementing alternative methods, like ground-level access platforms.</li> <li>- Fall-protection systems: Implement a functional and well-maintained fall protection system, including harnesses, anchor points, lifelines, and guardrails, to prevent falls during the loading process.</li> </ul>	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> <li>- Secure workspace: Establish a designated safe working zone around the decoiler, marked with clear signage and barriers, to prevent unauthorised access and unnecessary traffic in the area.</li> <li>- Pre-load inspections: Conduct thorough inspections of the decoiler and the coil before loading to identify any potential hazards or malfunctions and address them promptly.</li> <li>- Coil handling equipment: Use proper coil handling equipment, such as coil lifters, spreader bars, or slings, which can better manage the weight and rotation of the coil during the loading operation.</li> <li>- Load securing procedures: Develop and adhere to strict load securing procedures for each specific coil type and size, ensuring that it remains stable and secure throughout loading and operational processes.</li> <li>- Lock-out/tag-out (LOTO): Implement a lock-out/tag-out system to ensure the machinery, including the decoiler, is de-energised and safely locked out during maintenance, cleaning, and other periods of non-use.</li> <li>- Emergency response plan: Develop and regularly review an emergency response plan for responding to incidents involving the decoiler, including specific steps for communication, evacuation, and life-saving measures.</li> <li>- Regular maintenance and inspection: Conduct regular maintenance checks and inspections of the decoiler equipment to ensure it remains in good working order, addressing any identified issues or potential hazards promptly.</li> <li>- Supervision and communication: Maintain constant supervision and open communication among workers during the loading process to ensure that everyone is aware of their roles, responsibilities, and any evolving hazards. Encourage a culture of reporting incidents or near misses, so that any potential risks can be analysed and addressed proactively.</li> </ul>

## SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

## SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

**The SWMS must be reviewed regularly** to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are needed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

**The SWMS must be monitored regularly** for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

## SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	<input type="checkbox"/>	<input type="checkbox"/>	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input type="checkbox"/>	<input type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input type="checkbox"/>	<input type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input type="checkbox"/>	<input type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input type="checkbox"/>	<input type="checkbox"/>	
Permit requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input type="checkbox"/>	<input type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Describes any mandatory qualifications, experience, training, skills required to perform the work.	<input type="checkbox"/>	<input type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Lists any required permits or licenses.	<input type="checkbox"/>	<input type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input type="checkbox"/>	<input type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input type="checkbox"/>	<input type="checkbox"/>
