Phone: [Phone]

Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature:

Title:

Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS, as well as reviews and modifications of the SWMS.

Full Name:

Title:

Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT

<input type="checkbox"/> involves a risk of a person falling more than 2 meters.	<input type="checkbox"/> is carried out on or near pressurised gas mains or piping.
<input type="checkbox"/> is carried out on a telecommunication tower.	<input type="checkbox"/> is carried out on or near chemical, fuel or refrigerant lines.
<input type="checkbox"/> involves demolition of an element of a structure that is load-bearing.	<input type="checkbox"/> is carried out on or near energised electrical installations or services.
<input type="checkbox"/> involves demolition of an element related to the physical integrity of a structure.	<input type="checkbox"/> is carried out in an area that may have a contaminated or flammable atmosphere.
<input type="checkbox"/> involves, or is likely to involve, disturbing asbestos.	<input type="checkbox"/> involves tilt-up or precast concrete.
<input type="checkbox"/> involves structural alteration or repair that requires temporary support to prevent collapse.	<input type="checkbox"/> is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
<input type="checkbox"/> is carried out in or near a confined space.	<input type="checkbox"/> is carried out in an area of a workplace where there is any movement of powered mobile plant.
<input type="checkbox"/> is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	<input type="checkbox"/> is carried out in areas with artificial extremes of temperature.
<input type="checkbox"/> is carried out in or near water or other liquid that involves a risk of drowning.	<input type="checkbox"/> involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

RISK MATRIX										
LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS		
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			Elimination Remove the hazard.		
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	Substitution Replace the hazard.		
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	Isolation Isolate People from the hazard		
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard.		
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	Administrative Change the work.		
Notes on Hierarchy of Controls: Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.										
PERSONAL PROTECTIVE EQUIPMENT (PPE)										
FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
										
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).										
<p>Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.</p> <p>When a SWMS has been revised, the person conducting a business or undertaking must ensure all:</p> <ol style="list-style-type: none"> persons involved in the work are advised that a revision has been made and how they can access the revised SWMS; persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and, workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS. 										

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Tripping hazards, Chemical exposure	2M	<ul style="list-style-type: none"> - Keep the work area clean and clear of debris, equipment cables, and other tripping hazards to minimise the risk of falls and trips. - Conduct regular inspections of walkways and stairs in the work area to identify and eliminate any potential tripping hazards. - Provide adequate lighting to ensure clear visibility in the workspace, which will help reduce the likelihood of accidents due to poor visibility. - Ensure that workers wear appropriate personal protective equipment (PPE), such as chemical-resistant gloves and safety goggles, to prevent chemical exposure during drilling tasks. - Utilise secondary containment methods, like drip trays, to collect any leaks, spills or drips of chemicals, helping to minimise the risk of chemical exposure. - Store hazardous materials and chemicals in designated storage areas with appropriate labelling and secure lids to prevent accidental spills or exposures. - Train employees on safe handling, storage, and disposal techniques for hazardous substances associated with drilling pilot holes, reducing the risk of chemical exposure. - Implement a spill response plan to guide immediate actions that need to be taken during a chemical spill or exposure scenario. - Use proper drilling tools and equipment that are specifically designed for drilling pilot holes, to minimise risks associated with using inappropriate or makeshift tools. - Prioritise good communication within the team so that workers can report any issues or concerns regarding their work environment and facilitate early identification and resolution of risks. - Amend Standard Operating Procedures (SOP), if necessary, based on continuous evaluation and feedback of workers to further refine and enhance control measures to minimise hazards during the preparation stage. 	1L	
2. Equipment inspection	Electric shock, Falling equipment	2M	<ul style="list-style-type: none"> - Conduct daily visual inspections of all electrical equipment, including power cords and outlets, to ensure that there are no visible damages or exposed wires that may increase the risk of electric shock. - Regularly test and tag electrical equipment by a certified professional to ensure that it complies with Australian standards for electrical safety and minimise the chances of an electric shock. - Provide appropriate training to workers handling electrical equipment, ensuring they understand the safe use and potential risks associated with the equipment to prevent accidents due to mishandling. - Wear appropriate Personal Protective Equipment (PPE) such as insulated gloves, safety glasses, and steel-toed boots, to safeguard against the risk of electric shock and falling equipment. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Use only tools and drilling equipment that have been specifically designed and certified for core drilling into concrete floors. - Ensure proper anchoring of drilling equipment to prevent accidental detachment or slippage, thereby reducing the risk of falling equipment. - Do not overload electrical circuits or extension cords, as this can elevate the risk of electric shocks and fire hazards. - Implement a lockout/tagout procedure to isolate electricity and other sources of energy from the area where drilling work is being conducted. - Maintain a clean and clutter-free workspace by organizing tools and equipment to minimise trip hazards and ensure sufficient space to conduct work safely. - Establish a proper procedure for regularly inspecting and maintaining drilling equipment and any support systems used, reducing the risk of failure and falling equipment. - Utilising ground fault circuit interrupters (GFCIs) on all power outlets and tools to help prevent electric shocks in wet or damp conditions. - Keep a well-stocked first aid kit nearby and train employees in basic first aid procedures to respond efficiently in case of an accident or injury. - Ensure proper communication on site between workers and supervisors, allowing for immediate reporting of any faulty equipment, near-miss incidents, or other concerns related to workplace safety. 		
3. Site layout	Manual handling injuries, Collision with machinery	2M	<ul style="list-style-type: none"> - **Pre-work safety briefing**: Conduct a thorough pre-work safety briefing with all team members to ensure they are aware of the potential hazards, proper manual handling techniques, and the importance of communication while working in close proximity to machinery. - **Site inspection**: Ensure a thorough site inspection is carried out before work commences to assess any potential risks and obstructions that may cause manual handling injuries or collision with machinery. - **Establish exclusion zones**: Set up exclusion zones around drilling equipment and machinery to prevent workers from inadvertently entering hazardous areas and limit the risk of collisions with machinery. - **Use mechanical aids**: Utilise mechanical lifting aids, like trolleys or forklifts, to move heavy objects or equipment to reduce manual handling injuries. - **Ergonomic design and set up**: Make sure that the workstations and drilling equipment are designed and set up ergonomically to minimise physical strain and mitigate the risk of manual handling injuries. - **Safety signage**: Use clear and informative safety signage within the worksite to indicate hazardous areas and provide guidance on the safe handling of tools and equipment. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<p>- **Regular breaks**: Encourage workers to take regular breaks to rest and recover from physically demanding tasks to help prevent fatigue-related injuries.</p> <p>- **PPE**: Ensure all workers are equipped with appropriate personal protective equipment (PPE), including gloves, safety shoes, and high visibility vests, as necessary to protect against potential hazards.</p> <p>- **Team communication**: Establish and maintain clear lines of communication among all workers, particularly when operating machinery, to reduce the risk of collision between personnel and machinery.</p> <p>- **Machinery maintenance**: Regularly inspect and maintain drilling and other related equipment to ensure they are functioning safely and efficiently, minimising the risk of injuries due to malfunctions.</p> <p>- **Spotter assistance**: Assign a designated spotter to watch out for potential hazards and coordinate worker movements around machinery, providing warning when needed to avoid collisions and injuries.</p> <p>- **Training and supervision**: Ensure all workers are adequately trained in the safe operation of equipment, manual handling techniques, and site-specific safety procedures. Provide ongoing supervision to reinforce safe practices and address any hazards or issues that may arise.</p>

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are needed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	<input type="checkbox"/>	<input type="checkbox"/>	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input type="checkbox"/>	<input type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input type="checkbox"/>	<input type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input type="checkbox"/>	<input type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input type="checkbox"/>	<input type="checkbox"/>	
Permit requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input type="checkbox"/>	<input type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Describes any mandatory qualifications, experience, training, skills required to perform the work.	<input type="checkbox"/>	<input type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Lists any required permits or licenses.	<input type="checkbox"/>	<input type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input type="checkbox"/>	<input type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input type="checkbox"/>	<input type="checkbox"/>
