Electrical Isolate Lockout Test And Tag | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Electrical Isolate Lockout Test And Tag

Business Name: [Company Name]		ABN: [ABN]	SWMS#
Business Address: [Company Address]			
Contact Person:	Phone: [Phone]	Email:	

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-be	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrit of a stru	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing as stos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that re mporar upp to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

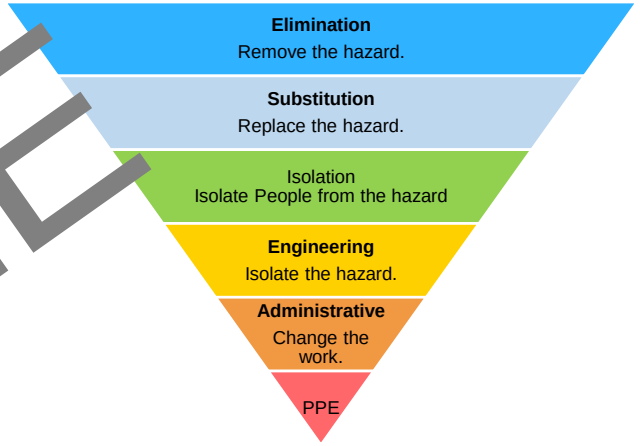
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost ef ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Exposure to live electrical parts, Inadequate working area	2	- Training and Competence: Ensure all workers involved in the task have received appropriate training in electrical safety, lockout procedures, and proper use of test and tag equipment. This should include hazard identification and awareness of potential risks, as well as comprehensively understanding the control measures being implemented. - Proper Tools and Equipment: Utilise insulated tools, lockout devices, and Personal Protective Equipment (PPE) designed specifically for safe isolation and testing of electrical systems. By using the correct equipment, workers can more effectively reduce the risk of contact with live electrical parts. - Verification of De-energised State: Following isolation of power sources, perform testing to verify that equipment is indeed de-energised before commencing work. Confirming no electrical current is present can help prevent accidental electrocution. - Clear Work Areas: Maintain a clutter-free and organised working environment in order to minimise tripping hazards, confusion, or crowding around electrical panels, which could lead to accidental contact or interference with the established precautions. - Lockout/Tagout Procedure: Implement a strict lockout/tagout process that requires clear documentation, systematic steps, and communication between all workers involved. The procedure must be adhered to consistently throughout the project, ensuring the status of all energy sources is known and controlled at all times. - Adequate Lighting: Provide sufficient lighting in the workspace to ensure that workers can easily identify potential hazards, see what they're doing, and enhance their visual acuity while carrying out tasks related to isolating, locking out, testing, and tagging. - Warning Signs: Clearly display warning signs to inform workers and bystanders of electrical hazards in the area, along with instructions regarding necessary precautions to avoid accidents or injury. - Periodic Inspections: Regularly inspect the work area, lockout devices, and tags to ensure they remain intact and functional throughout the project duration, thereby maintaining a safe working environment. - Designate Qualified Personnel: Assign specific, qualified individuals to oversee each step of the isolation and lockout process, as well as the application of test and tags. This ensures that each task is carried out by someone with appropriate knowledge and expertise, reducing the risk for errors or oversights. - Supervision: Require ongoing supervision, monitoring, and communication amongst all workers involved in the task, promoting overall electrical safety and awareness within the work area. - Emergency Action Plan: Develop a comprehensive emergency action plan that outlines specific procedures for responding to incidents involving live electrical parts, accidents, injuries, or other emergencies. Provide training to all team members to ensure they are familiar with the established processes.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Safe Work Method Statement (SWMS): Before commencing electrical work, complete a thorough SWMS that addresses potential hazards, risks, and control measures specific to the job site and situation. Communicate the contents of the SWMS to all team members and strictly adhere to the guidelines throughout the project.		
2. Identify isolation points	Incorrect identification of isolation points, Miscommunication with other workers	3H	- Clearly label all isolation points to ensure correct identification and minimise the risk of errors. - Provide comprehensive training for workers on identifying the appropriate isolation points within the workplace. - Conduct regular equipment inspections to ensure all isolation points are properly marked and functioning as intended. - Implement a detailed plan that outlines the sequence of tasks required to isolate, lockout, test, and tag each electrical isolation point. - Designate a competent person, such as a qualified electrician or supervisor, to verify the proper identification of electrical isolation points. - Establish a lockout/tagout (LOTO) system with clearly defined procedures that workers must follow before accessing electrical systems. - Ensure clear lines of communication among workers by implementing regular team briefings, toolbox talks, or other forms of communication. - Utilise signage, barricades, or warning devices to alert other workers about ongoing work at isolation points and controlled areas. - Develop and maintain a comprehensive isolation log that documents each completed action and provides real-time information to all workers. - Implement a "Permit to Work" system, requiring those carrying out the task to obtain authorization from management or supervisors. - Encourage workers to continuously update their colleagues on the status of the isolation process, especially during shift handovers or other critical moments. - Create an accessible repository of workplace diagrams, schematics, and maps highlighting isolation points for easy reference by workers. - Perform regular audits and inspections of the lockout/tagout process, ensuring compliance and effectiveness in mitigating risks associated with isolation points. - Foster a positive safety culture within the workplace by valuing open discussion and feedback, empowering employees to voice concerns and suggestions regarding the isolation process or any identified hazards.	2M	
3. Isolate the equipment	Unauthorised access to isolation point, Insufficient isolation methods	3H	- Clearly communicate and establish a proper isolation plan involving all relevant personnel, such as electricians, operators, and supervisors, to ensure complete understanding of the procedure.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Implement proper safety signage at the isolation points, including warning signs, lockout symbols, and access restrictions, to prevent unauthorised access. - Use standardised lockout padlocks and devices to secure all isolation points, with a unique key for each lock to eliminate the possibility of accidental unlocking by another person. - Properly de-energise the equipment before the isolation process begins, using appropriate personal protective equipment (PPE) and following standard operating procedures. - Utilise a written 'permit to work' system that details the isolation process, specific authorization levels, and any necessary safety precautions. - Provide comprehensive training on isolation methods, lockout/tagout procedures, and company policies related to the control of hazardous energy sources to all relevant employees. - Regularly inspect isolation points and lockout devices to ensure that they remain in good working condition and provide adequate protection. - Periodically review and update isolation plans and procedures to reflect changes in equipment, processes, or workplace configurations. - Develop and maintain an up-to-date list of authorised personnel who are permitted to access isolation points and implement lockout/tagout procedures. - Utilise a formal handover process when transferring responsibility for the control of isolation points between workers or between shifts. - Consider implementing additional isolation measures, such as barriers, guards, or interlocks, to further enhance equipment security and reduce the risk of unintentional re-energizational accidents. - Establish a clear communication system, such as regular meetings or toolbox talks, to reinforce isolation procedures and reinforcing awareness among employees of their importance. - Conduct periodic audits and assessments of the company's lockout/tagout programme to identify potential shortcomings and areas for improvement. - Encourage a transparent reporting culture that allows employees to report any issues or concerns related to equipment isolation without fear of retribution, enabling management to identify and rectify potential problems early.		
4. Lockout devices installation	Incompatible lockout devices, Defective lockout devices	2M	[redacted]	1L

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
