Floor Polisher | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Floor Polisher

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS

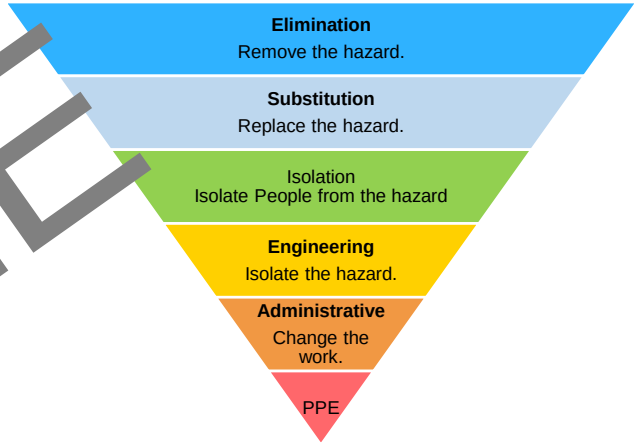
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Slips and Trips, Electric Shock	2M	- Proper housekeeping: Keep the work area clean and free of debris, loose cords, or any other potential obstructions that could lead to slips, trips, or falls. This includes removing any unnecessary equipment and tools from the immediate work area. - Use of non-slip footwear: All workers should wear appropriate, slip-resistant shoes or boots with good treads to minimise the risk of slipping on the polished floor surfaces. - Inspect electrical equipment: Before beginning work, thoroughly inspect the floor polisher and any extension cords for damage or frayed wires. Repair or replace any damaged equipment before use to prevent an electric shock hazard. - Use of Ground Fault Circuit Interrupter (GFCI): Always plug the floor polisher into a GFCI-protected outlet to protect against any electrical faults which could cause electric shock. - Training and instruction: Ensure all workers using the floor polisher have received proper training in its usage, as well as relevant Workplace Health and Safety regulations and guidelines. - Implement a buddy system: Encourage workers to assist and watch out for one another during the polishing process. This can help identify and address hazards more quickly and effectively. - Provide appropriate warning signs: Place "Caution: Wet Floor" signs in visible locations around the work area to alert others about the increased slip and trip risk during the polishing process. - Establish designated walkways: Clearly mark pedestrian walkways outside the immediate working area to reduce the risk of accidental slips and trips during the polishing process. - Ensure adequate lighting: Make sure the workspace has sufficient lighting to help workers see and avoid potential hazards while operating the floor polisher. - Use of Personal Protective Equipment (PPE): Workers should utilise appropriate PPE, such as gloves and safety goggles, to protect themselves from potential hazards during floor polishing tasks. Additionally, using hearing protection, like earmuffs or earplugs, can help protect workers from the noise generated by the floor polisher.	1L	
2. Inspect Equipment	Faulty Power Cord, Exposure to Chemicals	2M	- Ensure all equipment is inspected thoroughly for any visible signs of damage or wear, especially the power cord, prior to starting work. - Implement a regular maintenance schedule for equipment checks and servicing, as specified by the manufacturer guidelines. - Make sure all staff are properly trained to identify common signs of faulty equipment, such as frayed or damaged wires. - Replace or repair any damaged or faulty equipment immediately to prevent accidents.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Use a residual current device (RCD) with equipment to protect against power surges or electrical faults. - Keep work environments clear of clutter and rubbish to reduce trip hazards associated with cords. - Store chemicals in a designated area that is well-ventilated and protected from direct sunlight to minimise the risk of exposure to hazardous chemicals. - Use appropriate Personal Protective Equipment (PPE), such as gloves, safety goggles, and chemical-resistant aprons when handling or using chemicals. - Create an inventory list of all chemicals used during the floor polishing process and include their respective Safety Data Sheets (SDS) for easy access by employees. - Train staff in proper use, storage, and disposal of chemicals to minimise potential risks. - Establish clear communication channels and hazard signage to alert staff of areas where chemicals are being used or stored. - Immediately report any spills, leaks, or unusual odors related to chemical usage to a supervisor or workplace health and safety officer. - Have spill containment kits readily available in areas where chemicals are stored and ensure staff respond quickly to any incidents. - Implement a safety awareness programme for all employees to foster a culture of continuous improvements related to safety and safe practices while working with equipment and chemicals.		
3. Set up Workplace	Poor Lighting, Uneven Surfaces	2M	- Conduct a thorough inspection of the work area prior to commencing operation to identify any existing uneven surfaces, obstructions, or hazards that may increase the risk of accidents during operation. - Utilise proper lighting equipment like portable task lights or floodlights in areas with inadequate lighting to ensure sufficient visibility throughout the work zone. - Maintain clean working conditions and remove debris or clutter from the floor that may interfere with operations or cause unstable footing for personnel. - Install temporary signage near the work area reminding others of potential trip hazards and uneven surfaces, as well as directing foot traffic around the area to maintain a safe distance from the floor polishing process. - Regularly inspect stairs, steps, and ramps in the work zone to ensure they are stable and free from slippery substances or other potential hazards. - Make use of non-slip footwear to help prevent accidental slips and falls on uneven or wet surfaces. - Place power cords for equipment in a manner that prevents them from becoming trip hazards; use cable covers if necessary.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Implement temporary barriers or barricades around the work area to control access and ensure only trained and authorised personnel are allowed entry. - Incorporate regular breaks for workers to rest their eyes and minimise fatigue caused by working in poorly lit environments, which can lead to accidents. - Conduct toolbox talks prior to commencing work to properly instruct workers on safety protocols, emergency procedures, and possible hazards associated with operating the floor polisher in the given environment.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti se tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im ementa of cont measures.	☐	☐	
Permit requirements specified, such as Hot Wor Electrical Work, W at Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us d.	☐	☐	
Details of inspection checks required for any equipment listed ar noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
