Lasers Classes 1 and 2 | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Lasers Classes 1 and 2

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-be	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrit of a stru	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing as stos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that re mporar upp to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

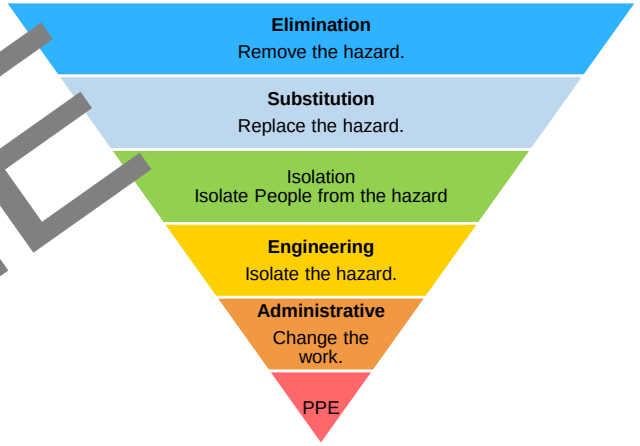
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Inadequate training, Laser misalignment	2M	- The proper training and certification programs shall be conducted by qualified trainers to ensure all workers understand the safe use risks, and precautions associated with lasers Classes 1 & 2. - Written instructions, including the necessary safety guidelines regarding the handling of lasers Classes 1 & 2, should be provided to each worker before starting the preparation process. - Ensure that only workers who have undergone appropriate training are allowed to handle or operate lasers Class 1 & 2 in the workplace. - Workers must always make use of appropriate personal protective equipment (PPE) during the preparation workshop, which may include safety glasses, gloves, and protective clothing, depending on the specific tasks being performed. - A risk assessment should be conducted to identify hazards associated with laser equipment and their potential impact on workers' health and safety. - Align all lasers properly and securely as per manufacturer's instructions and using industry-approved methods to prevent misalignment during operation. - Regularly inspect and maintain the alignment tools and devices to ensure their precision and effectiveness during alignment processes. - Implement strict lockout/tagout procedures to prevent unauthorised access or tampering of the laser equipment during the preparation phase. - Establish and enforce a clear line of communication among the team members during the preparation process to ensure any issues or discrepancies are promptly addressed. - Assign a qualified supervisor or experienced staff member with expertise in lasers Classes 1 & 2 as an overseer to monitor and guide workers during the preparation stage to prevent accidents or errors. - Display clear warning signs and labels around the work area to alert all workers about the presence of lasers and their respective hazards. - Schedule periodic check-ups and refresher training sessions for workers to update their knowledge and ensure retention of information regarding the safe usage and procedures involved in handling lasers Classes 1 & 2.	1L	
2. Installation	Electrical shock, Incorrect mounting	3H	- Proper Training and Education: Ensure that all workers involved in the installation process have undergone adequate training to understand and follow safety procedures, including the handling of electrical equipment and mounting lasers. - Lockout/Tagout Procedure: Implement a lockout/tagout procedure to isolate the power source when installing or working on the lasers, minimising the risk of electrical shocks.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Inspection of Equipment: Prior to each installation job, inspect electrical tools, cords, and Personal Protective Equipment (PPE) for any visible damages or faults. Repair or replace any damaged pieces before starting the work process. - Utilise Non-Conductive Tools: Use insulated or non-conductive tools during the installation process to minimise the risk of electrical shock. - Correct Mounting Procedures: Follow the manufacturer's guidelines for correctly mounting lasers of Classes 1 and 2, ensuring they are securely fastened to avoid dislodgment or accidental movement. - Use GFCI Protection: Ensure the use of Ground Fault Circuit Interrupter (GFCI) protection on electrical outlets or extension cords to reduce the risk of electrical shock from unexpected ground faults. - Set Up a Safe Workspace: Establish a designated work area with proper lighting, ventilation, and enough clearance for workers and equipment, which helps in preventing accidents that can lead to incorrect mounting. - Wear Appropriate PPE: Workers should wear suitable PPE, such as gloves, protective eyewear, and non-conductive footwear, to reduce the likelihood of injuries during the installation process. - Monitor Work Environment: Regularly check the work environment for any changes or hazards such as wet surfaces or spilled conductive materials, which could increase the risk of electrical shock. - Implement Emergency Response Plan: Develop and communicate an emergency response plan detailing actions to be taken in case of accidents, such as electrical shock incidents or injuries due to incorrect mounting. This will ensure a quick and effective response, minimising further harm to workers and equipment.		
3. Operation	Unintended exposure, Eye damage	2M	- Proper Training: Ensure that all personnel handling or working near lasers are adequately trained in laser safety, including proper usage techniques and understanding the specific hazards associated with their equipment. - Laser Safety Glasses: Require all individuals working in proximity to the lasers to wear appropriate Laser Safety Glasses that block or filter the specific wavelength of light emitted by the lasers being used. - Warning Signs: Place prominent warning signs at all entrances to areas where lasers are in use, clearly indicating the presence of potentially harmful laser radiation and the need for eye protection. - Beam Path Enclosures: Use enclosures or barriers around the laser beam path to physically prevent people from accidentally coming into contact with hazardous levels of laser radiation. - Controlled Access: Restrict access to laser work areas to only authorised and trained individuals, using locked doors, key card systems, or other security measures as appropriate.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Beam Shutter: Equip all laser systems with an interlocked beam shutter or similar device that blocks the beam when the laser is not in active use, preventing unintended exposure. - Laser Classification: Ensure that the correct laser class is being used for the intended application, with lower power classes preferred where adequate for the operation requirements. - Maintenance Procedures: Implement regular inspection and maintenance of laser systems to ensure they are functioning properly and safely, promptly addressing any technical issues or malfunctions that may present additional hazards. - Emergency Shutdown Procedures: Develop a clear emergency shutdown procedure for all laser systems and train all personnel on how to enact it in the event of an incident or failure posing a danger to workers or equipment. - Awareness Campaign: Conduct periodic workplace information sessions on laser safety, highlighting the potential hazards, safe operational practices, and the importance of following established safety protocols. - Incident Reporting: Establish and enforce a policy for reporting accidents and near misses involving lasers, ensuring that lessons are learned from these incidents and relevant safety measures are adjusted or reinforced as necessary. - Regular Audits: Perform regular safety audits of laser work areas, equipment, and operating procedures to identify potential hazards, assess risk levels, and address any areas requiring improvement to maintain the highest standards of workplace health and safety.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]ions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
