

Linear Saw | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Linear Saw

Business Name: [Company Name]		ABN: [ABN]	SWMS#
Business Address: [Company Address]			
Contact Person:	Phone: [Phone]	Email:	

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PROJECT MANAGER OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature: _____ Title: _____ Date: _____

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS, as well as reviews and modifications of the SWMS.

Full Name: _____ Title: _____ Phone: _____

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED | **NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS**

	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, to conduct and communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS

Client:	SCOPE OF WORKS Provide a detailed description of the specific work being carried out (otherwise known as scope of works).
Project Name:	
Project Address:

<input type="checkbox"/> High Voltage	<input type="checkbox"/> Mulcher	<input type="checkbox"/> Tilt-up Panels	<input type="checkbox"/> Roller	<input type="checkbox"/> Scissor Lift	<input type="checkbox"/> Tractor	<input type="checkbox"/> Other -	

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	Elimination Remove the hazard.
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	Substitution Replace the hazard.
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	Isolation Isolate People from the hazard
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	Administrative Change the work. PPE

Notes on Hierarchy of Controls: Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	EYE/FACE PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

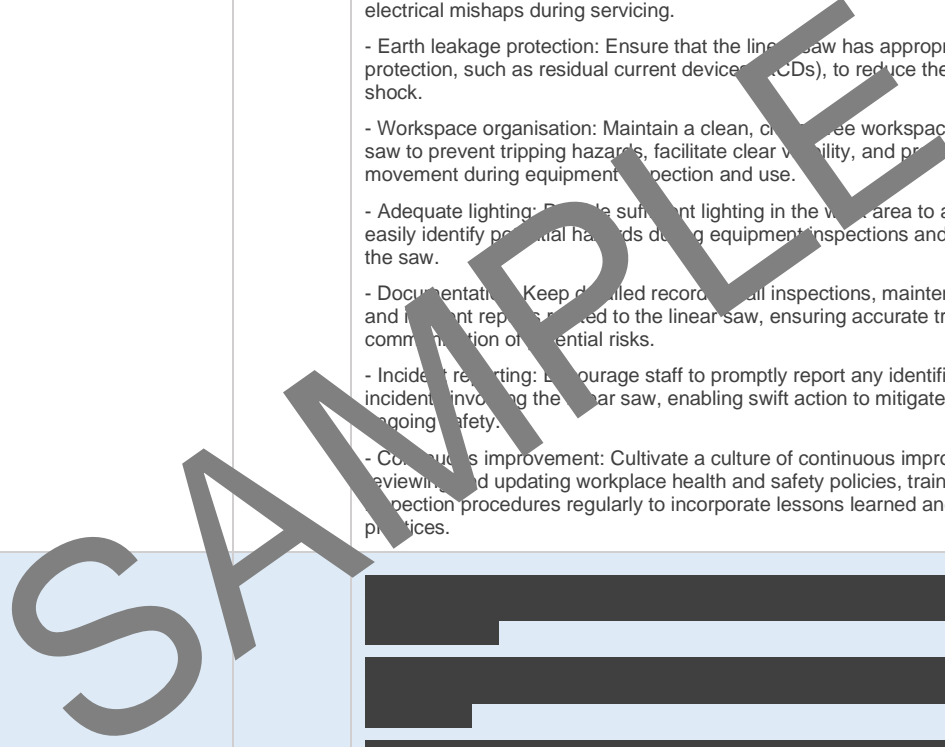

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Trip hazards, poor lighting	2M	<ul style="list-style-type: none"> - Conduct a pre-start inspection of the work area to identify and remove potential trip hazards, such as cables, debris, and tools. - Utilise cable covers or trunking to effectively manage cords on the ground, minimising the risk of tripping. - Clearly mark changes in floor level or steps using high visibility paints or temporary signage to draw attention to these hazardous areas. - Provide adequate lighting throughout the work area, including floodlights and portable lights for areas with insufficient natural light. - Require all workers to wear appropriate personal protective equipment (PPE) - particularly non-slip footwear, reflective vests, and hard hats - in compliance with Australian standards. - Keep the work environment clean and tidy by implementing good housekeeping practices, ensuring walkways are clear of clutter and workspaces are organised. - Create designated storage areas for tools, equipment, and materials when not in use, preventing them from becoming trip hazards. - Set up temporary barriers, cones, or safety tape around elevated linear saw work stations to guide pedestrian traffic away from potential trip hazards. - Implement regular on-site toolbox talks and training sessions on workplace safety, discussing trip hazards and the importance of proactive preventative measures. - Continuously monitor the work area for changes that could pose trip hazards or contribute to poor lighting, addressing issues as they arise. - Establish accessible emergency egress routes throughout the worksite, keeping these clear of clutter and ensuring they are well-lit at all times. - In areas where trip hazards cannot be removed (e.g., uneven surfaces), utilise warning signs or barricades to alert workers to take extra precautions. - Assign a full-time safety officer to oversee hazard management, ensuring that control measures are being effectively implemented, reviewed, and maintained. - Encourage an open line of communication between workers, supervisors, and managers for reporting, discussing, and resolving any trip hazards or lighting concerns in the workplace. 	1L	
2. Site Assessment	Uneven surfaces, falling objects	3H	<ul style="list-style-type: none"> - Conduct a thorough site inspection before commencing work, identifying potential hazards, such as uneven surfaces and falling objects. - Implement appropriate signage and barrier systems to cordon off hazardous areas, ensuring that access is restricted to authorised personnel only. - Ensure that all workers are adequately trained in the identification of hazards and safe work practices while using the linear saw. 	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Provide suitable personal protective equipment (PPE) for all workers, such as safety footwear, hard hats, and high-visibility clothing to reduce the risk of injury from uneven surfaces or falling objects. - Regularly monitor and maintain a clean and organised worksite, with particular attention given to the removal of any debris or obstacles that may create an uneven surface or pose a risk of falling objects. - Use mechanical aids, such as ramps, trolleys, or lifting equipment, when transporting heavy materials or equipment over uneven surfaces to reduce manual handling risks. - Implement an effective communication system, such as two-way radios or hand signals, to alert workers of potential hazards and ensure that everyone on site is aware of ongoing operations. - Inspect all tools and equipment used on site regularly for wear, damage, or malfunction to minimise the risk of falling objects or accidents caused by faulty equipment. - Develop a clear emergency response plan for the worksite, outlining procedures for evacuations, first aid, and reporting incidents involving uneven surfaces or falling objects. - Ensure that all workers take regular breaks and are encouraged to report any signs of fatigue, stress, or discomfort that could lead to unsafe work practices or accidents. - Implement a comprehensive and ongoing risk assessment process, continually reassessing hazards and control measures throughout the project lifespan to ensure that any changes in conditions are appropriately managed. - Encourage a culture of safety wherein workers actively participate in hazard identification and are supported in raising concerns or suggesting improvements to existing control measures. 		
3. Equipment Inspection	Damaged equipment, electrical hazards	2M	<ul style="list-style-type: none"> - Regular maintenance checks: Schedule routine inspections of the linear saw equipment to identify any potential damage or wear and tear. - Pre-use inspection: Before each use, complete a thorough visual assessment of the saw, power cables, and other essential parts for any signs of damage or malfunction. - Staff training: Ensure that all personnel operating or working near the linear saw have undergone adequate training in equipment handling, hazard identification, and emergency response procedures. - Personal protective equipment (PPE): Utilise appropriate PPE, such as safety glasses, gloves, hearing protection, and dust masks, to reduce the risk of injury from damaged equipment and electrical hazards. - Safe work procedures: Develop and implement standardised processes for equipment inspection, use, and maintenance to minimise the risk of accidents and injuries. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Lockout/tagout protocols: Implement lockout/tagout procedures when performing maintenance or repairing the linear saw to prevent unintended operation and electrical mishaps during servicing. - Earth leakage protection: Ensure that the linear saw has appropriate earth leakage protection, such as residual current devices (RCDs), to reduce the risk of electric shock. - Workspace organisation: Maintain a clean, clutter-free workspace around the linear saw to prevent tripping hazards, facilitate clear visibility, and promote safe movement during equipment inspection and use. - Adequate lighting: Provide sufficient lighting in the work area to allow workers to easily identify potential hazards during equipment inspections and while operating the saw. - Documentation: Keep detailed records of all inspections, maintenance activities, and incident reports related to the linear saw, ensuring accurate tracking and communication of potential risks. - Incident reporting: Encourage staff to promptly report any identified hazards or incidents involving the linear saw, enabling swift action to mitigate risks and ensure ongoing safety. - Continuous improvement: Cultivate a culture of continuous improvement by reviewing and updating workplace health and safety policies, training programs, and inspection procedures regularly to incorporate lessons learned and industry best practices.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are needed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	<input type="checkbox"/>	<input type="checkbox"/>	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input type="checkbox"/>	<input type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input type="checkbox"/>	<input type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input type="checkbox"/>	<input type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input type="checkbox"/>	<input type="checkbox"/>	
Permit requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input type="checkbox"/>	<input type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Describes any mandatory qualifications, experience, training, skills required to perform the work.	<input type="checkbox"/>	<input type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Lists any required permits or licenses.	<input type="checkbox"/>	<input type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input type="checkbox"/>	<input type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input type="checkbox"/>	<input type="checkbox"/>
