Metal Swaging Machine | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Metal Swaging Machine

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:

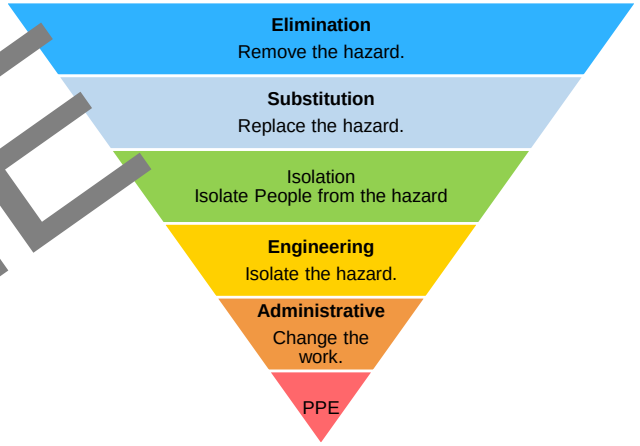
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Accidental falls, Uncontrolled release of energy	3H	- Ensure that the workplace including floors, walkways, and work areas is clean and free of obstructions to prevent accidental falls. - Provide a comprehensive training for all machine operators regarding safety precautions, handling procedure of tools and equipment to avoid potential hazards. - Carry out regular inspections of the machinery, checking for any signs of wear and tear, or loose parts which may cause an uncontrolled release of energy. - Workers should wear necessary Personal Protective Equipment (PPE) including safety footwear, gloves, and helmets, etc. to minimize the risk of injuries. - Install proper guards, barriers or other forms around high-risk areas to mitigate the risk of falls. - Appropriate signage should be visible and clear in the workplace indicating hazardous areas and safety protocols. - Regularly maintain and service swaging machines to ensure their correct working condition and to prevent unexpected releases of energy. - Implement job rotation or adequate breaks to prevent fatigue, which can contribute to accidents and mishandling. - Establish lock-out and tag-out procedures for when maintenance or repairs are done on the machine to prevent accidental startup. - Erect adequate scaffolding with handrails where working at heights is required to mitigate risks associated with fall hazards. - Keep the workplace adequately lit to prevent any accidents caused due to poor visibility. - Designate specific pathways for workers and moving equipment to minimize chances of accidental contact or collision. - Use safety harnesses or other fall arrest systems when working at elevated platforms. - Require workers to report any observed hazards or unsafe behaviors immediately to maintain a safe environment. Routine safety audits should also be undertaken to identify and categorize potential hazards in the workplace.	2M	
2. Machine Setup	Manual handling injuries, Entanglement risks	3H	- Proper Manual Handling Techniques: All employees should undergo training targeting the correct procedures and techniques for lifting and moving heavy items. This would help to reduce the risk of manual handling injuries. - Suitable Clothing/ Uniforms: Employees operating or nearby the metal swaging machine must wear close-fitted clothing, keeping sleeves fastened to avoid any potential entanglement with moving parts.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Personal Protective Equipment (PPE): Equip all employees working around the machine with necessary PPE including safety footwear, gloves, fully zipped coveralls and eye protection. The use of these can aid in reducing injury risks. - Regular Machine Checks: Implement a regular maintenance routine and conduct frequent inspections to ensure the machine is kept in good working order and identify any potential hazards early on. - Safety Guards: Ensure that the swaging machine has appropriate safety guards installed to prevent personnel from coming into contact with dangerous moving parts of the machine. - Mandatory Training: Organise detailed practical and theory training sessions about the machine operation, safety procedures, and risk mitigation strategies. It's also important to educate workers about what to do in case of an emergency. - Clear Work Area: Maintain a clear workspace at all times to prevent slip, trip and fall injuries. This includes cleaning up spills immediately, removing loose cables from pathways and getting rid of clutter in the work area. - Emergency Stop Functions: Check that all machines have accessible and clearly-marked emergency stop buttons. Staff should be trained on how and when to utilise these functions properly. - Rotating Distributed Tasks: Schedule rotating tasks if possible to avoid severe body stress from the overuse of certain muscle groups. - Supervision: Close monitoring should always be maintained whenever the machine is operating to spot any irregularities or issues promptly. Supervisors should be well-versed in safety protocols and capable of taking rapid actions when needed.		
3. Inspection and Testing	Electrical risks, Hazardous noise	4A	- Regular maintenance and inspection of the metal swaging machine to ensure the electrical components are functioning correctly. - Implementation of a regular testing schedule for the machine, paying particular attention to the machine's electrical system. - Use noise-cancelling ear protection equipment to mitigate the risk of hazardous noise. - Make sure all employees working around the machine have received sufficient training on its usage. - All workers should be educated on basic first aid procedures that might be necessary in case of accidents involving the swaging machine. - Maintain clear signage around the work area indicating the potential hazards posed by the machine. - Implement a system for keeping detailed records of tests and safety measures taken including date, nature of test or safety measure and any issues identified. - Ensure that the power is turned off whenever the machine is not in use to avoid any accidental activation.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Always inspect and test the machine before operation, immediately report any defect and do not use if found faulty. - Use only tested and tagged electrical tools and equipment that are regularly maintained and checked. - Placement of emergency stop buttons in easily reachable areas around the machinery. - Ensure regular breaks for workers operating or working near the machinery to reduce continuous exposure to noise. - Incorporate hazard reduction strategies - like using sound deadening materials to suppress the machinery generated noise. - Promote a workplace culture where safety concerns can be freely raised and addressed promptly.		
4. Operation Start-up	Unplanned machine operation, Cutting or shearing	3H	[redacted]	2M

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti se tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im ementa of cont measures.	☐	☐	
Permit requirements specified, such as Hot Wor Electrical Work, W at Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us d.	☐	☐	
Details of inspection checks required for any equipment listed ar noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
