

## PVC Pipe Saw | SAFE WORK METHOD STATEMENT (SWMS)

### TASK OR ACTIVITY: PVC Pipe Saw

Business Name: [Company Name]

ABN: [ABN]

SWMS#

Business Address: [Company Address]

Contact Person:

Phone: [Phone]

Email:

### THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature:

Title:

Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS, as well as reviews and modifications of the SWMS.

Full Name:

Title:

Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then communicate those hazards and then to further take steps to either eliminate or control each hazard.

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

## ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT

<input type="checkbox"/> involves a risk of a person falling more than 2 meters.	<input type="checkbox"/> is carried out on or near pressurised gas mains or piping.
<input type="checkbox"/> is carried out on a telecommunication tower.	<input type="checkbox"/> is carried out on or near chemical, fuel or refrigerant lines.
<input type="checkbox"/> involves demolition of an element of a structure that is load-bearing.	<input type="checkbox"/> is carried out on or near energised electrical installations or services.
<input type="checkbox"/> involves demolition of an element related to the physical integrity of a structure.	<input type="checkbox"/> is carried out in an area that may have a contaminated or flammable atmosphere.
<input type="checkbox"/> involves, or is likely to involve, disturbing asbestos.	<input type="checkbox"/> involves tilt-up or precast concrete.
<input type="checkbox"/> involves structural alteration or repair that requires temporary support to prevent collapse.	<input type="checkbox"/> is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
<input type="checkbox"/> is carried out in or near a confined space.	<input type="checkbox"/> is carried out in an area of a workplace where there is any movement of powered mobile plant.
<input type="checkbox"/> is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	<input type="checkbox"/> is carried out in areas with artificial extremes of temperature.
<input type="checkbox"/> is carried out in or near water or other liquid that involves a risk of drowning.	<input type="checkbox"/> involves diving work.

## ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

<input type="checkbox"/> Forklift	<input type="checkbox"/> Crane/s	<input type="checkbox"/> Hoist/s	<input type="checkbox"/> Excavator	<input type="checkbox"/> Backhoe/Loader	<input type="checkbox"/> Boom Lift	<input type="checkbox"/> EWP	<input type="checkbox"/> Genie Lift

RISK MATRIX									
LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS	
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			<b>Elimination</b> Remove the hazard.	
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	<b>Substitution</b> Replace the hazard.	
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	<b>Isolation</b> Isolate People from the hazard	
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	<b>Engineering</b> Isolate the hazard.	
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	<b>Administrative</b> Change the work.	
<b>Notes on Hierarchy of Controls:</b> Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.									

PERSONAL PROTECTIVE EQUIPMENT (PPE)											
FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	EYE PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

**Note:** A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

- persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
- persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
- workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Tripping over materials, Incorrect use of equipment	2M	<ul style="list-style-type: none"> <li>- Keep the work area clean and tidy by regularly removing any debris, materials, or equipment that is not in use to prevent tripping hazards.</li> <li>- Clearly mark designated walkways, storage areas, and workstations to ensure proper organisation and minimise the risk of accidents.</li> <li>- Provide workers with thorough training on the correct use of PVC pipe saws and other related equipment, including the importance of following manufacturer recommendations and safety guidelines.</li> <li>- Require all workers to wear appropriate personal protective equipment (PPE), such as gloves, safety glasses, and steel-toed boots, in order to reduce the risk of injury from sharp edges or dropped tools.</li> <li>- Use cable covers, cord organizers, and retractable extension cords to prevent electrical cables from becoming a tripping hazard.</li> <li>- Perform regular inspections of equipment, tools, and machinery to ensure that they are in good working condition and safe to use. Remove any damaged or faulty equipment until it can be repaired or replaced.</li> <li>- Clearly communicate the scope, sequence, and expected duration of tasks to all team members to ensure that everyone has a clear understanding of their roles and responsibilities.</li> <li>- Implement a system for reporting and addressing safety concerns promptly to encourage a strong safety culture and proactively address potential risks before they escalate.</li> <li>- Hold briefings and toolbox talks at the beginning of each shift to reinforce the importance of workplace safety, discuss specific hazards related to the day's tasks, and remind workers of the control measures in place to mitigate risks.</li> <li>- Establish an emergency response plan, including first aid kits and trained personnel, evacuation routes, and procedures for reporting incidents, ensuring that all workers are aware of these processes and prepared to respond if a situation arises.</li> </ul>	1L	
2. Measuring & marking	Sharp edges, Eye damage from debris	2M	<ul style="list-style-type: none"> <li>- Provision of Personal Protective Equipment (PPE): Workers should wear safety gloves and appropriate clothing to minimise the risk of injury from sharp edges during measuring &amp; marking.</li> <li>- Use of proper tools: Utilise measuring and marking instruments specifically designed for industrial applications and PVC pipes, such as a pipe cutter fitted with a fine-toothed saw blade, to prevent damage and reduce hazards.</li> <li>- Training and awareness: All workers involved in this work step should be adequately trained in safe handling techniques and provided with regular updates on potential risks and hazards associated with measuring and marking PVC pipes.</li> </ul>	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> <li>- Eye protection: Safety goggles or glasses must be worn by all workers when cutting, measuring, and marking PVC pipes to safeguard against eye damage due to debris.</li> <li>- Secure pipe before cutting: Place the PVC pipe in a stable position using a pipe vice or stand, ensuring it doesn't roll or move while being measured, marked, and cut.</li> <li>- Clear workspace: Keep the working area clear and free of clutter, and ensure adequate lighting is present to address any potential trip hazards during the measuring and marking process.</li> <li>- Proper disposal of debris: Regularly collect and appropriately dispose of cuttings and debris to minimise the risk of slip injuries and maintain cleanliness in the working area.</li> <li>- Regular inspection of tools and equipment: Periodically check the condition of the tools and equipment used for measuring, marking, and cutting PVC pipes, ensuring they are in good working order and safe for use. Replace any damaged or worn-out tools as needed.</li> <li>- Barrier systems: Install temporary barriers around the cutting area to contain flying debris and restrict unauthorised personnel access during measurement, marking, and cutting operations.</li> <li>- Correct technique: Workers should practice the correct methods for measuring, marking, and cutting PVC pipes, including applying gentle pressure while cutting to minimise the chance of slips and accidents.</li> <li>- Emergency response plan: Establish an emergency response procedure for the worksite, including first aid kits and trained first-aid responders, to ensure prompt and appropriate action in case of an accident or injury during the measuring and marking stage.</li> </ul>		
3. Cutting PVC pipe	Cuts and abrasions, Dust inhalation	3H	<ul style="list-style-type: none"> <li>- Proper Personal Protective Equipment (PPE): Ensure all workers wear appropriate PPE, including cut-resistant gloves, safety goggles, and dust masks to minimise the risk of cuts, abrasions, and dust inhalation.</li> <li>- Pre-cutting inspection: Visually inspect the PVC pipe for any defects or damage that may cause it to break, shatter or splinter during cutting, which could lead to injuries.</li> <li>- Appropriate tools: Utilise the correct cutting tools, such as PVC pipe saws, ratchet cutters, or handsaws specifically designed for cutting plastic pipes to reduce the possibility of slips and potential injury.</li> <li>- Tool maintenance: Regularly inspect and maintain cutting tools, ensuring they are sharp and in good condition to minimise effort and prevent slippage during use.</li> <li>- Safe handling techniques: Train workers on proper techniques when cutting PVC pipes, including holding the pipe securely and maintaining a safe distance from the cutting edge to minimise the risk of injury.</li> </ul>	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> <li>- Ventilation: Ensure adequate ventilation in the workspace to disperse dust particles and provide fresh air, reducing the risk of dust inhalation.</li> <li>- Dust collection: Implement a dust collection system in the work area, such as a vacuum with a HEPA filter or wet cutting method, to capture and contain airborne dust particles before they can be inhaled by workers.</li> <li>- Cutting area setup: Set up a designated cutting area with appropriate signage, away from other unrelated tasks and pedestrian traffic, to minimise hazards posed by flying debris or workers accidentally coming into contact with cutting equipment.</li> <li>- Breaks and rotation: Schedule regular breaks and rotate workers among different tasks to avoid overexertion and the risk of accidents due to fatigue.</li> <li>- Workplace policies and training: Develop and implement workplace health and safety policies related to PPE, pipe cutting, and routinely provide workers with training on hazard identification, risk assessment, and control measures to ensure their ongoing understanding and compliance.</li> </ul>

SAMPLE

## EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

## SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

## SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

**The SWMS must be reviewed regularly** to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are needed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

**The SWMS must be monitored regularly** for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

## SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	<input type="checkbox"/>	<input type="checkbox"/>	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input type="checkbox"/>	<input type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input type="checkbox"/>	<input type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input type="checkbox"/>	<input type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input type="checkbox"/>	<input type="checkbox"/>	
Permit requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input type="checkbox"/>	<input type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Describes any mandatory qualifications, experience, training, skills required to perform the work.	<input type="checkbox"/>	<input type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Lists any required permits or licenses.	<input type="checkbox"/>	<input type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input type="checkbox"/>	<input type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input type="checkbox"/>	<input type="checkbox"/>
