ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS WMS. ST HAVE THE FOLLOWING COMMUNICATED			EEN CONSULTED AND
requirements to first identify any site hazards, conduction unical those	NAME	SIGNATURE	DATE
If an incident or a near miss occurs, all work must successful anately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Slip, trip and falls, manual handling injuries	2М	 Conduct a thorough risk assessment of the work area prior to starting any tasks, identifying any potential hazards and determining subble control measures. Ensure all workers are trained in safe manuals undling techniques and are aware of their individual lifting capacity limits to priorit manual bandling injuries. Maintain good housekeeping practices by horoing the work area clean and free from obstructions or tripping hazards, such as an equipment, and debris. Utilise appropriate PPE, incluing sturdy footwear with slip-uestant soles, gloves for gripping and handling mate its, and safety glasser if usessary. Use signage and annow to describe the specific work areas and keep unauthorised personnel from atering thruite, reacting the life wood of accidents caused by crowded controls. Schotele active swindequate time-pacing, allowing ample preparation and ensuing porkers or a rushed or fatigued during the process. Follo borner processer for handling broken WC pans and cisterns, including sharp or ector molling to delines to prevent cuts or puncture injuries. Deployable mechanical aids and team lifting techniques when dealing with heavy bulky items, reducing the chances of strains or muscle injuries resulting from poor muscal handling. Always use ladders, step stools, or mobile platforms whenever elevated work is needed, ensuring that they are in good condition, stable, and securely placed on level ground. Implement a buddy system or spotter for tasks requiring extra vigilance, ensuring that coleagues are looking out for one another. Encourage open communication between workers and supervisors, making it easy to report new hazards or changing conditions in the workspace. Store tools, equipment, and materials properly when they're not in use, ensuring that walkways and passages remain clear and unobstructed. Regularly review and update the SWMS, incorporating new control measures or modifications base	1L	
2. Site inspection	Unsecured site, faulty equipment	ЗН	 Secure the worksite by installing temporary fencing or barricades, ensuring only authorised personnel have access to the area and minimising potential hazards from unauthorised access. Create a site inspection checklist to identify any existing issues on the worksite, including unsecured areas, unsafe materials, or equipment malfunctioning before starting work on replacing the broken WC pan and cistern. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Conduct regular safety briefings for all workers to ensure they are aware of the site hazards and appropriate control measures.		
			- Provide proper personal protective equipment (P ^r), such as gloves, safety goggles, and hard hats to all workers, and ensuring they are aware of their correct usage.		
			- Regularly inspect and maintain all tools and support used in the task to ensure they are in good working condition and free from eacts.		
			- Assign a dedicated site supervisor to oversee the rork process and monitor site safety and hazard controls, enuming all workers country and workplace health and safety regulations.		
			- Implement a char communication stem among workers, including using hand signals or rates, to communicate efficiency specially during potentially hazardous procedures on the opening machine.		
			- Implay that a buy system where each worker is paired with another to keep an eye out for optential matards, assist with difficult tasks and provide support if needed		
			Perform equipment satety checks prior to use, including checking for faulty bectives, work parts, or other potential issues that may create a hazard during the back ment process.		
			Establish an emergency action plan and clearly communicate it to all workers at the so they know how to respond, evacuate, or shut down the operation in case of any accidents or hazards arising during work.		
	C		 Provide proper training and instruction to workers on how to identify and handle hazardous materials, such as sharp edges and sewage. 		
			- Ensure that workers wear appropriate personal protective equipment (PPE) including gloves, safety glasses, and waterproof boots.		
			- Develop and implement a plan for the safe and effective isolation and disconnection of water supply and sewage systems associated with the WC pan and cistern replacement.		
3. Disconnecting old WC pan and cistern	Exposure to sewage, sharp edges	ЗH	- Use appropriate hand tools and equipment designed for removing old WC pans and cisterns to minimise the risk of injuries from sharp edges or splinters.	2M	
			- Inspect all tools and equipment prior to their use to ensure their effectiveness and condition.		
			 Implement a buddy system where workers can assist one another during the disconnection process, providing additional support and guidance when handling potentially hazardous materials. 		
			- Utilise warning signs and barriers to demarcate the work area and prevent unauthorised entry, minimising exposure to hazards for non-essential personnel.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAF WC A STHUD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to review the sure it remains revised if necessary) if relevant control measure are a conconsultation with workers (including contractors are subcontract of the SWMS and their health and safety representatives who re workplace.

ke sure it remains effective and must be reviewed (and acception of the process should be carried out in s any subcontract s) who may be affected by the operation esentatives who recented that work group at the

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

- 1. Spot Checks.
- 2. Consultation with workers, contractors and sub-contractors.
- 3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.			
Names and signatures of all relevant personnel consulted during the development of the SWMS.		P	
Name, signature, position and date signed of the person approving the SWMS.			
Specific personnel and qualifications, experience is noted in the SWMS.			
Provides a step-by-step process of tasks required to carry out the activity or task.			
Adequate risk assessment of any identified hazards has been completed.			
Foreseeable hazards are identified and documented for each step.			
Any hazards listed in any site risk assessments have been added to the SWN			
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.			
Check control measures added to the SWMS are the most effecting sections.			
Responsible person is assigned and listed on the SWMS for the impement of continue measures.			
Permit requirements specified, such as Hot Wren Electrical Work, Versat Heights etc.			
SWMS identifies plant and equipment to be up.			
Details of inspection checks required for any equipment listed ar noted on the SWMS.			
Describes any mandatory qualifications, experience vaining skills required to perform the work.			
Applicable personal protective equipment is selected on the SWMS.			
Lists any required permits or licenses.			
Reflects and documents any legislative references and/or Australian Standards.			
Identifies any hazardous substances used with specific control measures in line with any SDS.
