

Tenon Cutter | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Tenon Cutter

Business Name: [Company Name] ABN: [ABN] SWMS#

Business Address: [Company Address]

Contact Person: Phone: [Phone] Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PROJECT MANAGER OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature: Title: Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS, as well as reviews and modifications of the SWMS.

Full Name: Title: Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, to conduct a risk assessment of those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS

Client:	SCOPE OF WORKS Provide a detailed description of the specific work being carried out (otherwise known as scope of works).
Project Name:	
Project Address:	
Project Manager:

Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT

<input type="checkbox"/> involves a risk of a person falling more than 2 meters.	<input type="checkbox"/> is carried out on or near pressurised gas mains or piping.
<input type="checkbox"/> is carried out on a telecommunication tower.	<input type="checkbox"/> is carried out on or near chemical, fuel or refrigerant lines.
<input type="checkbox"/> involves demolition of an element of a structure that is load-bearing.	<input type="checkbox"/> is carried out on or near energised electrical installations or services.
<input type="checkbox"/> involves demolition of an element related to the physical integrity of a structure.	<input type="checkbox"/> is carried out in an area that may have a contaminated or flammable atmosphere.
<input type="checkbox"/> involves, or is likely to involve, disturbing asbestos.	<input type="checkbox"/> involves tilt-up or precast concrete.
<input type="checkbox"/> involves structural alteration or repair that requires temporary support to prevent collapse.	<input type="checkbox"/> is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
<input type="checkbox"/> is carried out in or near a confined space.	<input type="checkbox"/> is carried out in an area of a workplace where there is any movement of powered mobile plant.
<input type="checkbox"/> is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	<input type="checkbox"/> is carried out in areas with artificial extremes of temperature.
<input type="checkbox"/> is carried out in or near water or other liquid that involves a risk of drowning.	<input type="checkbox"/> involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

<input type="checkbox"/> Forklift	<input type="checkbox"/> Crane/s	<input type="checkbox"/> Hoist/s	<input type="checkbox"/> Excavator	<input type="checkbox"/> Backhoe/Loader	<input type="checkbox"/> Boom Lift	<input type="checkbox"/> EWP	<input type="checkbox"/> Genie Lift
<input type="checkbox"/> Trencher	<input type="checkbox"/> Drilling Rig	<input type="checkbox"/> Trucks	<input type="checkbox"/> Formwork	<input type="checkbox"/> Bobcat	<input type="checkbox"/> Flammable Gas	<input type="checkbox"/> Fuel	<input type="checkbox"/> Dozer
<input type="checkbox"/> High Voltage	<input type="checkbox"/> Mulcher	<input type="checkbox"/> Tilt-up Panels	<input type="checkbox"/> Roller	<input type="checkbox"/> Scissor Lift	<input type="checkbox"/> Tractor	<input type="checkbox"/> Other -	

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			Elimination Remove the hazard.
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	Substitution Replace the hazard.
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	Isolation Isolate People from the hazard
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	Administrative Change the work. PPE

Notes on Hierarchy of Controls: Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	EYE/FACE PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

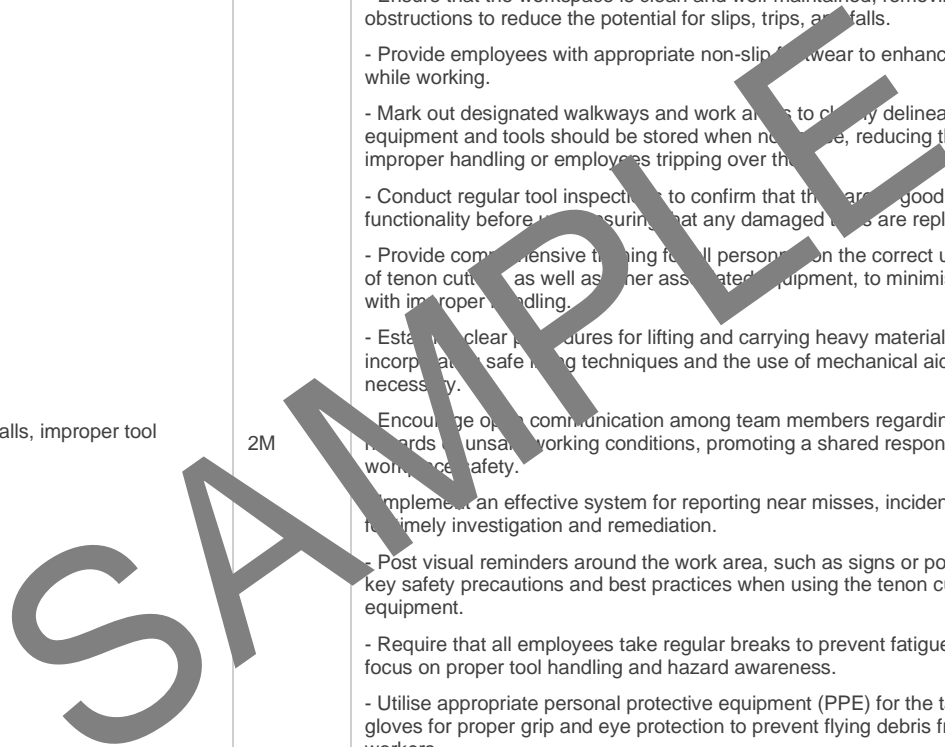

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Slips, trips and falls, improper tool handling	2M	<ul style="list-style-type: none"> - Ensure that the workspace is clean and well-maintained, removing any debris or obstructions to reduce the potential for slips, trips, and falls. - Provide employees with appropriate non-slip footwear to enhance grip and stability while working. - Mark out designated walkways and work areas to clearly delineate where equipment and tools should be stored when not in use, reducing the chance of improper handling or employees tripping over them. - Conduct regular tool inspections to confirm that they are in good condition and functionality before use, ensuring that any damaged tools are replaced immediately. - Provide comprehensive training for all personnel on the correct usage and handling of tenon cutters as well as other associated equipment, to minimise risks associated with improper handling. - Establish clear procedures for lifting and carrying heavy materials or tools, incorporating safe lifting techniques and the use of mechanical aids wherever necessary. - Encourage open communication among team members regarding potential hazards or unsafe working conditions, promoting a shared responsibility for workplace safety. - Implement an effective system for reporting near misses, incidents, and accidents for timely investigation and remediation. - Post visual reminders around the work area, such as signs or posters, highlighting key safety precautions and best practices when using the tenon cutter and other equipment. - Require that all employees take regular breaks to prevent fatigue and maintain focus on proper tool handling and hazard awareness. - Utilise appropriate personal protective equipment (PPE) for the task, including gloves for proper grip and eye protection to prevent flying debris from injuring workers. - Maintain adequate lighting within the workspace to eliminate dimly lit areas that could contribute to slips, trips, or falls, and ensure that employees can see what they're doing at all times. - Conduct ongoing refresher training on workplace health and safety, reinforcing the importance of adhering to established protocols and emphasising each worker's role in maintaining a safe working environment. 	1L	
2. Setting up equipment	Incorrect installation, electrical hazards	3H	<ul style="list-style-type: none"> - Proper training and supervision: Ensure that workers are adequately trained in the setup and installation process of equipment, specifically focusing on correct installation procedures and identification of electrical hazards. 	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Inspect equipment before use: Conduct a thorough inspection of the Tenon Cutter and relevant accessories to ascertain that there are no damages or issues that may increase the risk of incorrect installation or electrical hazards. - Follow manufacturer's guidelines: Adhere to the manufacturer's instructions for setting up the equipment, including understanding the recommended specifications and configurations for safe operation. - Identify potential electrical hazards: Assess the work area and surrounding environment for any electrical hazards such as wet surfaces, damaged power cords, or incorrectly grounded outlets, and take necessary measures to avoid these hazards when setting up the equipment. - Use appropriate personal protective equipment (PPE): Workers should be equipped with proper PPE, including insulated gloves, safety glasses, and steel-toed boots, to minimize the risk of injury from electrical hazards during equipment setup. - Disconnect power during installation: Ensure that the power source for the Tenon Cutter is disconnected during the setting up process, minimising the potential for electrical hazards to occur. - Check wiring and connections: Visually inspect all electrical components, plugs, and wiring of the Tenon Cutter to ensure they are secure, functional, and free from damage. - Regular maintenance and testing: Schedule routine maintenance checks for the Tenon Cutter according to the manufacturer's recommendations, ensuring that any required repairs or replacements are carried out promptly by qualified technicians. - Correct positioning and support: When installing the Tenon Cutter, ensure that it is securely positioned on a stable surface, properly supported, and in line with the manufacturer's recommended settings. - Clear workspace and organised storage: Keep the work area surrounding the Tenon Cutter clean and free from clutter, reducing the likelihood of tripping hazards, and ensure all equipment and tools are stored neatly and safely when not in use. - Emergency response plan: Maintain a clear understanding of the site's emergency response procedures, including knowing the location of first aid kits and fire extinguishers, and ensure that all staff members are familiar with these protocols in case of an incident involving incorrect installation or electrical hazards. 		
3. Inspecting Tenon Cutter	Rust, damaged parts	3H	<ul style="list-style-type: none"> - Regular inspection and maintenance: Ensure the Tenon Cutter is inspected regularly for signs of rust, wear or any damaged parts. Implement a routine maintenance schedule to keep the tool in optimal working condition. - Visual inspection before use: Conduct a thorough visual check of the Tenon Cutter before each use, paying close attention to any corroded or damaged components that could pose a risk while in operation. - Use appropriate personal protective equipment (PPE): Workers should wear suitable PPE, such as safety gloves, eye protection, and long-sleeved shirts or jackets to safeguard against potential injuries from rust or damaged parts. 	1L

SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Clean and lubricate cutter heads: Keep the cutter heads clean and adequately lubricated to minimise friction and prevent corrosion, which can lead to rust formation. - Proper storage: Store the Tenon Cutter in a dry, well-ventilated area away from moisture and humidity to prevent rust and corrosion. - Replace worn-out or damaged components: Promptly replace any parts on the Tenon Cutter that are too worn, corroded or otherwise unsafe for use. - Training: Provide comprehensive training to workers on the proper functioning, handling, and maintenance of the Tenon Cutter to ensure they understand the hazards associated with its use and how to mitigate them. - Dispose of damaged cutters: If a Tenon Cutter shows extensive damage or severe rust, it must be disposed of safely and replaced. - Regularly monitor workplace conditions: Routinely assess the environment where the Tenon Cutter is used to ensure it remains free from dust or debris build-up, which may hinder its performance and exacerbate wear. - Use appropriate cutting techniques: Train workers in employing suitable techniques for using the Tenon Cutter, minimising the likelihood of slip or breakage that could result from an inappropriate application. - Anti-corrosion treatments: Consider applying anti-corrosion treatments, such as protective coatings or rust inhibitors, to the Tenon Cutter as a proactive measure to prevent rust formation. - Reporting and communication: Encourage workers to report any unsafe conditions, such as damaged or rusted Tenon Cutters, immediately. Communicate the importance of adhering to established safety procedures and promptly addressing any hazards that are discovered.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are needed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	<input type="checkbox"/>	<input type="checkbox"/>	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input type="checkbox"/>	<input type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input type="checkbox"/>	<input type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input type="checkbox"/>	<input type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input type="checkbox"/>	<input type="checkbox"/>	
Permit requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input type="checkbox"/>	<input type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Describes any mandatory qualifications, experience, training, skills required to perform the work.	<input type="checkbox"/>	<input type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Lists any required permits or licenses.	<input type="checkbox"/>	<input type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input type="checkbox"/>	<input type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input type="checkbox"/>	<input type="checkbox"/>
